

A cool solution to household waste

The BinRefrigerator, specifically designed for the safer storage of household waste, eliminates the build-up of most harmful bacteria as well as significantly reducing the unpleasant smells generated by the waste as it rots

The innovative solution was developed by The Corner Fridge Company as an answer to problems caused by rotting garbage, and with currently over 9 million households now having their waste bins emptied only once every two weeks, this is a problem that is going to grow.

The BinRefrigerator uses refrigeration technology to store waste at 5°C., the temperature necessary to eliminate the build up of most harmful bacteria, and is very easy to use. An empty wheelie bin is wheeled into the cabinet and then accessed for waste disposal via a hinged lid in the top of the BinRefrigerator.

The BinRefrigerator's cabinet is designed with the outdoor environment in mind and constructed from stainless steel – offering a much more attractive proposition than most standard wheelie bins.
